

Thermotech MultiSystem™

Tailor-made system solution for tap water and radiator connections

Thermotech MultiSystem™ is our systems for tap water and radiator connections. With our MultiSystem™, you get a safe water distribution system that has been tested and approved according to the industry's strictest rules.

Pipes

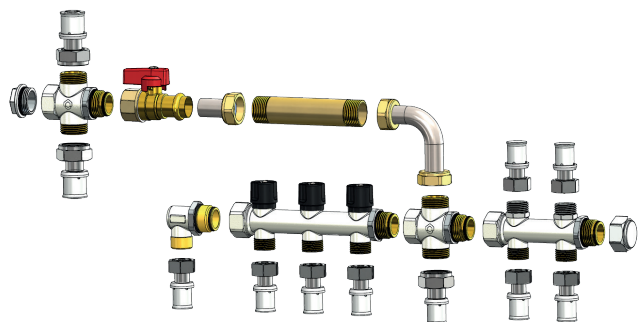

Thermotech's PE-RT and AluComposite pipes with associated connection systems provide a flexible, simple and reliable system for use in tap water as well as heating and cooling systems. The pipes are available both with protective pipes, protective pipes and insulation or only insulated. Our Alu-Composite pipes in straight lengths have a thicker aluminum layer to make the pipes more rigid and the installation to stay straight and neat over time.

We have complete solutions with all necessary assembly details, press and compression ring couplings and different valves.

Tap water manifolds

The manifold is equipped with Thermotech's unique quick seal, a splicing technology and O-ring seals that mean that the parts do not need to be sealed with flax or glue. It also means that, when several manifolds are connected in series, the connections of the manifolds can be turned in different directions without risk of leakage.

A wide range of compatible parts makes the manifold modular and flexible to solve the vast majority of needs. All connections have c/c 50 mm.

The assortment includes accessories for the distributor, such as ball valves, brackets and plugs. All components for tap water are manufactured in dezincification hardened brass.

Manifold cabinet

The cabinet for our tap water manifolds is available in standard design and adapted for insulated pipes, energy or water metering. Pipe penetrations are mounted on delivery and the cabinet is prepared for easy mounting with a stand.

Leakage indication is connected via an output in the bottom of the cabinet. Cover plate for the outlet of the leakage indication pipe through the wall and splash covers are included. Frame and door are available as accessories.

For the easiest possible ordering and installation, order fully assembled via Thermotech Prefab.

Services

For larger or complicated installations, we are happy to help you plan. If you wish, we deliver packed and marked in ready quantities for each object, for example for each apartment in an apartment building. Of course, we deliver directly to the construction site, or wherever you wish.

Our range also includes assembly details, couplings and valves for installing trunks and lines on walls, ceilings and floors. We can therefore offer flexible overall solutions for both heat, water and trunks with complete deliveries directly to the construction site.
